Child & Adolescent Mental Health Services (CAMHS)
Kimberworth Place,
Kimberworth Road,
Rotherham,
S61 1HE
Tel: 01709 304808

Dear parent/carer,

Following an assessment completed by the Neurodevelopmental Assessment Team at Rotherham CAMHS, your child has received a diagnosis of ADHD (Attention Deficit Hyperactivity Disorder).

What does this mean?

ADHD is a condition that includes difficulties with attention, hyperactivity and impulsivity. It is thought that between 2-5% of school children have ADHD. Despite these difficulties, people with ADHD still have strengths in other areas. Please see your child's assessment report for details on identified areas of strength and needs.

What next?

Having a diagnosis of ADHD may help your child, your family and you receive support that you need. This may include support with areas of difficulty and help in school and it can include medication. Your child will be open to the Rotherham CAMHS ADHD Post-Diagnosis team and you will have your first appointment in the near future.

Now that the assessment is complete, your child will be discharged from the Neurodevelopmental Assessment pathway.

What if I have more questions?

We have provided you and your child with an information pack, alongside the assessment report, which includes lots of information about ADHD, where to look for advice and the support available to you. You can also find out more at your first appointment with the CAMHS ADHD team. Your child's school's SEN co-ordinator (Special Educational Needs) may also be able to answer questions.

Yours sincerely,

Rotherham CAMHS Neurodevelopmental Assessment Pathway

Thank you for coming to see us at CAMHS. After looking at all the information we have learnt about you, we have agreed that you have ADHD.

What is ADHD?

ADHD stands for Attention Deficit Hyperactivity Disorder. Lots of people have ADHD in the world.

ADHD is not a disease and it does not mean that there is something wrong with you. It is something that people have all their lives, but it can get easier to manage.

Every person who has ADHD is different. Lots of people with ADHD have difficulties with concentrating, listening and staying still, as well as other things. People with ADHD also have lots of things that they're really good at and we call those strengths.

What does this mean for me?

Knowing that you have ADHD means that the people around you can learn more about what you need and what you're brilliant at.

You may also be able to get more help in school or at home.

What next?

You will see doctors and nurses in the ADHD team at CAMHS. These people will work with you to find ways to help in any areas you might be finding difficult.

If you need more help with how you're feeling or things that you're finding difficult, you may meet more people in the future. They might be at school or other places.

How can I get help?

It is important that you tell an adult who you can trust if you think you need some help or if you're finding something difficult. It doesn't matter if the problem seems too big to manage or too small to talk about. You could tell someone in your family, or a teacher. They can then make sure you get the right help.

Rotherham CAMHS Neurodevelopmental Assessment Pathway 2020.

Your ADHD brain is a sports car

We have great news for you!

We have learned a lot about you and guess what? You have an amazing brain! Your brain is incredible.

Your brain is like a sports race-car engine. It is very powerful. With the right help, you will win many races in your life.

But there is one problem – you have bicycle brakes. Your brakes are not strong enough to control the powerful brain you've got.

So sometimes you race past places where you mean to stop or you ignore instructions you mean to hear.

But, don't worry. There are people who will help you strengthen your brakes, so you can become the champion you are.

Neurodiversity

Neurodiversity means variations of the brain.

This means that there may be some differences with learning and thinking.

But brain differences are normal.

Diversity and difference means strength and resilience.

Celebrate difference, encourage strength, support weaknesses.

Neurodiversity is used to describe the 1 in 20 people who have any of the following:

- Dyslexia
- Dyscalculia
- ADHD
- Autism
- Tourette's syndrome
- Dyspraxia
- Dysgraphia

1 in 5 humans are Neurodiverse, therefore this must be part of the natural diversity in human evolution. This argues that Neurodiversity is not an error in genetics but it is part of our growing understanding of the diversity of minds, intelligences, abilities, and differences that are part of humanity.

Celebrate neurological differences – celebrate successful individuals and help spread Neurodiversity awareness.

Boost self-esteem – embrace the special interests and successes of young people with neurological differences, this can help to boost feelings of self-worth and avoid feelings of not fitting in.

Recognise mental health issues – be vigilant of any signs of emotional or mental distress, it could be that specialist support is required or they may just need a friendly, safe space.

Books about ADHD for parents

Understanding Girls with AD/HD – *Written by Kathleen G. Nadeau, Ellen B. Littman and Patricia O. Quin.*

Activity books and journals for children and teens

The You Are Awesome Journal

An interactive journal full of life hacks, challenges and activities to give kids the confidence to come up with their own plan of action to be the best they can be. Whether setting out their goals, planning the best practice ever, keeping calm with breathing exercises or making paper aeroplanes to understand marginal gains, readers will love the brilliant activities in The You Are Awesome Journal. This is the perfect toolkit for anyone who dreams big - and who wants to make those dreams come true.

The Big Life Journal

Packed with stories, poems, quotes, illustrations and writing prompts, this guided journal is the world's first growth mind-set book created specifically for children. Growth mind-set activities help children to recognize their ability to learn and motivates them to harness the power of their own mind. It helps children learn to embrace challenges, to persevere, and how to grow from feedback.

My Emotions Journal: Feelings Journal for Kids and Teens - Help Children and Tweens Express Their Emotions - Through Drawing and Writing

Everyone feels better when they can recognise and express their feelings and this can sometimes be difficult for kids to do - and even more so for those children coping with conditions such as Autism or ADHD. This fun journal will give your child an outlet for their emotions, in a creative way through both writing and drawing.

Social Skills Activities for Kids: 50 Fun Exercises for Making Friends, Talking and Listening, and Understanding Social Rules

Social Skills Activities for Kids gives children the confidence to successfully navigate social situations at home, school, and the world in between. These engaging activities help kids develop and use their social skills super powers.

Support services for you and your child

Following your child's diagnosis of an neurodevelopmental disorder (autism/ADHD) you do not have to feel alone. There is a breadth of support in the community and online that you and your child can access.

Rotherham Parent Carer Forum

A registered charity run by and for families of children and young people whoa have Special Educational Needs and/or Disabilities (SEND). They:

- have weekly drop-in sessions that provide information, peer support and activities
- put on activities for the whole family, such as bowling, soft play/sensory sessions, roller skating and male parent care sessions
- provide training workshops, a peer support service and a counselling service.

Family Lives website

Provides advice and information on every stage of a child's development. There is a section for SEND which provides information on special educational needs/disabilities, sleep advice and fun activities.

There is a confidential helpline for emotional support, information, advice and guidance.

0808 800 2222

Parent to Parent Service

A service run by trained parent volunteers that provides confidential emotional support for parents of autistic children over the phone The volunteers can:

- provide an impartial listening ear
- support to identify key issues and strategies
- direct to appropriate services and information.

ADHD Foundation

Provides useful resources and tips to help parents, carers and young people understand and cope with and ADHD diagnosis. Families can find links to training courses and other events across the country.

www.adhdfoundation.org.uk

National Autistic Society website

Provides useful information and tips for various factors such as communication, behaviours, education, transition and adult life. There is information about their services for example their specialist schools. support in mainstream schools, community support, and home and work life support.
